Measurement: Solving Problems Involving Money

## Questions:

- How can you use counting up to make change?
- How can you count to make change from a $\$ 20$ bill used to buy a Krabby Patty Deluxe Meal for $\$ 8.36$ ?

One Way: Start with $\$ 8.36$. Count up using the fewest coins.

| Give This | Get That |
| :---: | :---: |
| 4 Pennies $\rightarrow$ | $\$ 8.40$ |
| 1 dime $\rightarrow$ | $\$ 8.50$ |
| 1 half dollar $\rightarrow$ | $\$ 9.00$ |
| $1 \$ 1.00$ bill $\rightarrow$ | $\$ 10.00$ |
| $1 \$ 10.00$ bill $\rightarrow$ | $\$ 20.00$ |
|  |  |

- How can you add to find the total amount of change given?

$$
00.4+0.10+0.50+\$ 1.00+\$ 10.00=\$ 11.64 \text { change given }
$$

Another Way: Start with $\$ 8.36$. Count up a different way.

| Give This | Get That |
| :---: | :---: |
| 4 Pennies $\rightarrow$ | $\$ 8.40$ |
| 2 nickels $\rightarrow$ | $\$ 8.50$ |
| 2 quarters $\rightarrow$ | $\$ 9.00$ |
| $1 \$ 1.00$ bill $\rightarrow$ | $\$ 10.00$ |
| $2 \$ 5.00$ bills $\rightarrow$ | $\$ 20.00$ |

The change is the total amount given, $\$ 11.64$
